

FOR EXISTING ONSIGHT CUSTOMERS

Bring shipment temperature records into your existing OnSight workflow

You already use OnSight for your apple monitoring programme. Silentrac BLE offers a way to collect temperature readings during transport and upload them into OnSight using a compatible phone.

The person uploading the readings does not need an OnSight account. Your team can then review the uploaded temperature history within your organisation's account.

Silentrac is Precision Monitoring's device brand. OnSight is the software platform used to upload, store and review the temperature records.

HOW THE WORKFLOW COULD FIT

01 Record

Place the configured logger with the shipment to store temperature readings.

02 Retrieve & upload

Use a compatible phone to retrieve readings by Bluetooth and upload to OnSight.

03 Review

Review uploaded readings in your account. Confirm how they link to the shipment.

Cloud records update after upload.
The logger does not independently transmit live cellular or GPS updates.

LET'S LOOK AT YOUR CURRENT PROCESS

Who collects the readings?

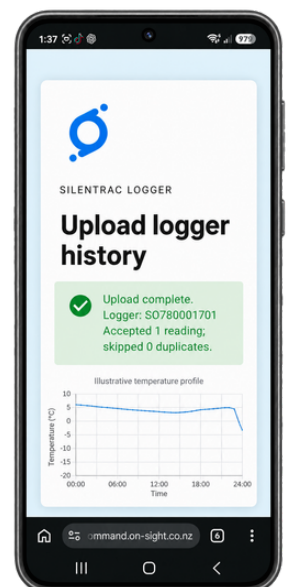

Who retrieves the data at destination, and what phone would they use?

How do records reach your team?

How are files shared today, and is anything difficult to collect, share or find?

Where should the records sit in OnSight?

What shipment reference, account link or report would your team need?

Let's look at one shipment workflow

and see whether BLE upload would add value in your cold chain management.
